

Improvement of environmental education in Senegal

The objective of the project is increased knowledge in environment and environmental protection issues among the population in Dakar, capital of Senegal. Based on Estonian experience, specific training materials on environment and environmental protection issues will be developed for the pupils and teachers in the area. Also trainings for both target groups will be conducted, the course includes trainings for teachers on environmental studies and practices in Estonia and in Nigeria (both in daily education and in other educational forms like “learning-by-doing”). Practical mini-projects on environmental protection topics will be organised. The increased knowledge about environment and environmental protection is a pre-requisite for creating a cleaner and healthier environment as well as getting rid of the present pollution. The partners of the project are Estonian Ministry of Foreign Affairs and Senegalese American Bilingual School.
